

## ABSTRACT

A cooling system (27) for use with a storage system (10) having a storage device (18) includes a drive rail (22), a rail channel (24) that is adjacent to and at least partly bounded by the drive rail (22), and a fluid source (20) that provides a fluid to remove heat from the storage system (10). The storage device (18) is coupled to the drive rail (22). As the storage device (18) operates it generates heat. At least a portion of the fluid from the fluid source (20) is moved through the rail channel (24) to remove the heat from the storage system (10).
